Testimonial from Shawn Senna, tutee:

I recently embarked on my senior year at Regis University in the Computer Information Systems program, and as part of it, was required to enroll in several senior level Computer Science courses. Coding does not come naturally to me, and the prerequisites I took for these classes were taught in a different language, so naturally I was floundering a bit. Thankfully Michael was available to walk me through the extensive homework assignments each week. Thanks to his help, not only did I receive A's on all of my coding assignments, but I walked away with a much better understanding of the content each week. Additionally, the shared-screen, remote tutoring method that he employs, I found to be extremely convenient and effective. I would absolutely recommend Michael for Computer Science tutoring! **Contact:** (720)-435-6542
